NATIONAL WEATHER SERVICE  
National Reconditioning Center  
1520 E. Bannister Road  
Kansas City, Mo. 64131

June 16, 2005

MEMORANDUM FOR: Marcus Points  
Resource Management Branch

FROM: D. Alan Morris  
Chief, National Reconditioning Center

SUBJECT: FY 2005-Q3 NRC Inventory Value

REFERENCE: R. J. Dominic  
May 25, 2005 email, "3rd Quarter Data Call for Statements"

In response to the referenced email, the following are the results of the National Reconditioning Center (NRC) inventory valuation.

The National Weather Service has defined subassemblies of various equipment as repairable items. When one of these items fails, it is shipped to the NRC. The NRC stores the defective item until such time as the Consolidated Logistics System (CLS) issues a request to repair it. These items are known as the NRC Unserviceable Inventory in CLS.

Each item in the NRC unserviceable inventory is tracked throughout the storage and repair process by work order number, a perpetual inventory. To validate the accuracy of our process, we annually run a computer program to randomly select five percent of the items for an inventory audit. On June 15, 2005 we generated a random inventory sample then performed the inventory audit. *National Reconditioning Center Inventory Audit* (Attachment 1) is the final audit report and includes a list of the items in the random sample.

The following shows your specific requirements and our findings.

1. Report and schedules for NRC supplies inventory.

There were 24,610 items in the NRC unserviceable inventory on June 15, 2005. See the report *NRC Repairable Inventory Value* (attachment 2).

2. Carry amount and net realizable value of the excess, obsolete, and unserviceable items.

Initial Value	\$ 39,128,443.49
Beyond economic repair - Obsolescence adjustment	\$ (922,548.00)
Beyond economic repair - Net realizable value	\$ 1,107.06
System decommissioning - Obsolescence adjustment	\$ (10,938,996.52)
System decommissioning - Net realizable value	\$ 13,126.80
	<hr/>
	\$ 27,281,132.83

3. Disclose any changes in the methodology for calculating the allowance for excess, obsolete, and unserviceable items.

There was no change in calculating the allowance for excess and obsolete items. The document entitled "Obsolescence Adjustment June 15, 2005" (attachment 3) provides more information.

4. Disclose any restrictions on the use or disposition of inventories.

There are no undisclosed restrictions on the use or disposition of the inventory.

5. Report of inventory held for repair.

*NRC Repairable Inventory Value* (attachment 2) shows each line item, base value, quantity on hand, total base value, and total obsolescence adjusted value. The base value is calculated by subtracting the NRC repair price from the CLS issue cost. The CLS issue cost is the price charged to the NWS field office each time they buy an item from the warehouse.

6. Report the methodology used to identify the correct category to which inventory is assigned and any changes to this methodology.

The NRC does not determine the category of line items but applies the categories, repairable or disposable, already established in CLS by other NWS offices.

If you have any further questions, please call Tim Batliner at 816-926-3217. You can also reach him at [tim.batliner@noaa.gov](mailto:tim.batliner@noaa.gov).

**NATIONAL RECONDITIONING CENTER  
INVENTORY AUDIT  
JUNE 15, 2005**

**Introduction**

The National Reconditioning Center (NRC) is the equipment repair depot of the National Weather Service located in Kansas City, MO. NRC maintains an inventory of defective equipment awaiting repair. NRC's computerized equipment tracking system provides a perpetual inventory. Spot checks are made on the inventory throughout the year. Near the end of the fiscal year, the inventory is validated by an audit of no less than five percent of stock. At the end of the fiscal year, NRC generates a report providing the quantity and value of the inventory for incorporation into the financial statements of the National Oceanographic and Atmospheric Administration. This year the annual Inventory Audit was conducted on June 15, 2005 at the request of NOAA/OFA.

**Summary**

On June 15, 2005, the inventory report showed a total of 24,610 defective items in inventory. The computer system randomly selected 1,231 items (Attachment 1) to be inventoried. The value of the sample was \$1,245,668.72. Based on the sample, the count accuracy of the inventory system was found to be 100%.

**Procedure**

On June 15, 2005, the inventory report showed a total of 24,610 defective items in inventory. The Oracle based computer system randomly selected items (Attachment 1) to be inventoried. Each NRC audit team was given a list of equipment to check along with the pertinent data for each item. In addition to inventorying, teams verified the accuracy of NRC internal information for each individual item. The complete check for each item consists of Agency Stock Number (ASN), serial number, location, quantity, and NRC Work Order Number (WON). Once the lists were completed, the team signed the bottom of each inventory audit sheet and returned the sheets to the NRC Senior Equipment Technician, Bobby Owen.

**Findings**

Count Errors: None, the teams found all 1,231 items.

Minor Discrepancies: There were 6 minor discrepancies found. The minor discrepancies were as follows:

<u>ASN</u>	<u>WON</u>	<u>Noted discrepancy</u>	<u>Page</u>
R400-45A1	246352	Serial number recorded as Z-HA35 on all paper work returned from Fairchild AFB as a Quality Deficiency Report, This means the item was considered as "received defective" and is tracked by the Air Force using the serial number on their report. The correct manufacturer's serial number is 41434-90. Correction made.	10

R400-5A3A2	232884	Serial number recorded as 02 3168 H20, correct serial number W-0008. Correction made.	14
	296591	Serial number recorded as 344, correct serial number E244. Correction made.	
S100-1A3A1	228063	Serial number recorded as 196261186, correct serial number 19626186. Correction made.	17
S100-1A5PS1	139698	WON was logged into ASOS Repair on June 9, 2005. Part was actually found on the defective shelf location A6-H3.	18
T331-2	275849	Serial number recorded as 3318A05448, correct serial number 3318A15448. Correction made.	21

An error rate for minor discrepancies was not calculated since a single item can have multiple minor discrepancies.

#### Corrective Actions

Serial number and location data have been corrected, no further action required.

#### Conclusion

The inventory count accuracy was 100%. This audit confirms the NRC inventory and the associated tracking system is extremely accurate.

Roger Coffin  
Chief, Weather Systems Repair Branch

Value Each

-----

The base value equals the CLS issue cost minus the NRC repair price. However, if the computed value is less than zero, then it is set to zero.

Value adjustment formula

-----

IF "Replace in FY" is equal to 2005, then the adjustment percentage is 0.

If "Replace in FY" is greater than 2007, then the adjustment percentage is 100.

If "Replace in FY" is 2006 or 2007 then the adjustment percentage is the quantity repaired in FY 2004 divided by the quantity at the NRC multiplied by 100. However, if the computed adjustment is greater than 100, then it is set to 100. If it is less than 20, then it is set to 20.

Total Value

-----

The base total value equals the quantity at NRC multiplied by the base value each.

The adjusted total value equals the base total value multiplied by the value adjustment percentage.

# **Obsolescence Adjustment**

June 15, 2005

There are three parts to the value adjustment. Part one is the value of equipment declared *beyond economic repair*. Part two is the value of the equipment that is being replaced by new systems. Part three is the net realizable value.

## **Beyond Economic Repair Value**

The average of the value of equipment declared beyond economic repair for the last five fiscal years will be used as the adjustment value for the current inventory total value.

FY 2000	\$969,122
FY 2001	\$1,049,298
FY 2002	\$1,116,626
FY 2003	\$846,227
FY 2004	\$631,466
Annual Average	\$922,548

## **System Decommissioning Value**

Each line item (ASN) must be evaluated and tagged with the estimated year of replacement.

Equipment expected to be replace in 2008 and beyond is given full value.

Equipment expected to be replaced in 2005 is given a value of zero which is consistent with the practice for NLSC stock.

Equipment expected to be replaced in 2006 or 2007 is adjusted using the following formula which apportions full value to that percentage normally being repaired and zero value to the unused inventory. However, the adjusted value is never less than twenty percent nor greater than one hundred percent of full value.

$$\frac{\text{Number of repairs last fiscal year}}{\text{Total unserviceable inventory count}} \times \text{full inventory value} = \text{adjusted inventory value}$$

## **Net Realizable Value**

Excess property is sold through GSA procedures. Previous sales were reviewed to determine an average percentage of the value.

Date	Reported Value	Sale Amount
10/99	\$183,450	\$897
11/99	\$1,836,761	\$2,590
3/00	\$613,471	\$2,022
7/00	\$271,088	\$882
8/00	\$2,292,203	\$600
11/00	\$1,367,862	\$717
2/01	\$484,485	\$1,200
4/01	\$1,449,258	\$500
6/01	\$152,257	\$80
6/01	\$128,251	\$250
10/01	\$485,622	\$400
1/02	\$256,778	\$100
6/02	\$467,940	\$837
4/03	\$55,070	\$800
4/03	\$667,327	\$418
6/03	\$103,500	\$485
9/03	\$302,316	\$335
5/04	\$384,204	\$386
8/04	\$224,693	\$325
Total	\$11,726,536	\$13,824
Sale Amount as a percent of reported value		0.12%

## **Computer Process for the Beyond Economic Repair Value**

The value for each fiscal year was determined by running the Oracle program survey\_value.sql. which created a text file survey.txt. The file is a list of all WONs with a 'SURVEY' disposition code and the ASN active in CLS. The survey.txt file was loaded into an Excel file and the data was evaluated by repair section personnel to remove line items that were surveyed due to system replacement.

## **Computer Process for the System Decommissioning Value**

The report *G64\_asn\_fy\_replace.rdf* lists each ASN and the estimated fiscal year for replacement. The repair branches review the list and the data is updated as required.

After all FY 2004 transactions are completed, the script *load\_fy\_repair\_stats\_2004.sql* is run. This loads the FY 2004 repair statistics, such as total quantity repaired, into the table *fy\_repair\_stats*.

The table *inventory\_2005\_Q3* is loaded by running the script *load\_table\_inventory\_2005\_Q3*. The table is a permanent record of the inventory count and value.

The report *D35\_stock\_value.rdf* lists each ASN, inventory quantity, value adjustment factors, the full value, and the net realizable value.
